

# Home water efficiency checklist

Do you know how much water your household uses? A home water checklist can help save you water and money, by monitoring how much water you use and fixing leaks promptly.

## 1 How much water do we use?

- Find out your water use snapshot by checking your SA Water bill.
- Check your water meter, which is typically located in the ground outside, towards the front of the property.
- With more than half of home water use occurring inside, this efficiency checklist will help you understand your water use, or if you may have a leak.

## 2 Water efficiency calculator

- Complete the water efficiency calculator to understand where you use water in your household.
- Use the home efficient water use table on the following page (3) to help you calculate the litres of water per use\*.

Water use	No. of people in home (A)	No. of uses per week (B)	Litres of water per use (C)*	Total per week (AxBxC)
Toilet				
Shower				
Bath				
Teeth cleaning				
Shaving				
Washing hands				
Drinking				
Washing dishes				
Dishwasher				
Washing machine				
Inside cleaning such as showers, floors				
Washing cars/bikes/ boats				
Washing pets				
Watering gardens/lawns				
Outside cleaning such as driveway, balconies				
Pool/spa/water features				
Other				
<b>Total</b>				

NB: An online digital water calculator for home and garden is available on our website [sawater.com.au/bewaterwise](http://sawater.com.au/bewaterwise)

### 3 Efficient water use table

- Use this table to help complete the water efficiency calculator.

Location	Use	Litres of water used
Bathroom	Toilet: dual flush 6/3 (or 4.5/3)	3 litres per half flush or 6/4.5 litres per full flush (WELS rated <sup>^</sup> )
	single flush only	11 litres per flush
	Shower	6–11 litres per minute
	Bath	120 litres per filled bath
	Brushing teeth: with water running with a cup	3 litres per minute 0.5 litre per person
	Shaving: with water running with a cup	3 litres per minute 0.5 litre per person
	Washing hands with water running	3 litres per minute
	Cleaning showers: with the shower running with a bucket	6–11 litres per minute 9 litres per filled bucket
Kitchen	Washing dishes: by hand dishwasher	15 litres per half-filled sink 7 litres per load (5 star WELS rated) Older dishwashers up to 25 litres per load
	Drinking	2 litres per person per day
Laundry	Washing clothes: by hand	22 litres per half-filled laundry trough
	washing machine* (e.g. 6kg load capacity)	30 litres per load (6 star WELS rated) 88 litres per load (3 star WELS rated) Older machines up to 180 litres per load
Outdoors	Washing outdoors, including pets, furniture, car: using running hose using a filled bucket	15 litres per minute 9 litres per bucket
	Watering gardens: with a hose with a sprinkler	15 litres per minute 9–15 litres per minute
	Hosing driveways/pavements	15 litres per minute
	Topping up pool/spa/water features:	15 litres per minute
Leaks	Leaks: slow-dripping tap leak toilet cistern leak pool/spa small leak	3–27 litres per day 10 litres per day (barely visible) to 260 litres per day (large) 130 litres per week

<sup>^</sup> WELS = Water Efficiency Labelling and Standards

## 4 Do you have any leaks?

### Check a tap for leaks

- Place a measuring cup (that measures millilitres) under the leaky tap and start a stop-watch.
- Leave the cup under the leaky tap for 15 minutes.
- Note down how many millilitres were captured, then calculate how many litres per hour the tap is leaking.
- You can work out how much water would be wasted in 1 day, in 1 week and in 1 year.

### Check toilet for leaks

- Remove the cistern cover and pour in enough food colouring to change the colour of the water in the cistern.
- Wait for a few minutes to see if the colour of the water in bowl changes colour. If the coloured water appears after a few minutes in the bowl, there is a leak.

### Check how much water your toilets use

- Remove the cistern cover and shut off the water supply to the toilet. Identify where the cistern fill point is.
- Flush the toilet to empty the cistern.
- Refill the cistern to the fill point with a measuring jug and calculate how much water is used with each flush.

### Check your tap flow rates

- Place a 10 litre bucket under the tap you are checking, turn it on midway and start a stop-watch.
- Leave the bucket under the tap for 30 seconds only.
- Note down how many litres were captured in 30 seconds and double it to calculate a minute, then you can calculate how many litres per hour the tap provides (flow rate).

A general guide for flow rates is as follows:

- Sink taps flow should not exceed 12 litres per minute
- Hand basin taps flow should not exceed 6 litres per minute
- Shower flows, if you have them, should not exceed 9 litres per minute

## 5 Are your appliances water efficient?

- If your appliances are reasonably new, the manufacturer's product information will tell you how much water they use.
- When buying new appliances, choose those with a higher water efficiency rating where possible. The water rating label on the product will help you identify the most water-efficient products—look for the product with the most stars. Visit [waterrating.gov.au](http://waterrating.gov.au) to understand Water Efficiency Labelling and Standards (WELS).

### Check efficiency of appliances

- If your appliances are older, you can use your water meter to work out how much water each appliance uses.
- To do this, ensure all water-using devices are turned off and then record the water meter reading.
  - Use only one appliance while all other water-using devices remain switched off.
  - When the appliance is finished, check the meter reading again.
  - The difference in the meter readings is the amount of water, in litres, used by the appliance,
- Alternatively, contact a licensed plumber to help determine the water consumption of individual appliances and your overall household.
